**Background:** ADIPOQ is expressed in adipose tissue exclusively. It encodes Disintegrin and metalloproteinase domain-containing protein 10 with similarity to collagens X and VIII and complement factor C1q. Disintegrin and metalloproteinase domain-containing protein 10 circulates in the plasma and is involved with metabolic and hormonal processes. Mutations in ADIPOQ are associated with adiponectin deficiency. Multiple alternatively spliced variants, encoding the same protein, have been identified.

**Application Notes:** Optimal working dilutions should be determined experimentally by the investigator. Suggested starting dilutions are as follows: WB (1:500-1:2000), ELISA (1:5000). Not yet tested in other applications.

**Storage Buffer:** PBS containing 50% Glycerol, 0.5% BSA and 0.02% Sodium Azide.

**Storage Instructions:** Stable for one year at -20°C from date of shipment. For maximum recovery of product, centrifuge the original vial after thawing and prior to removing the cap. Aliquot to avoid repeated freezing and thawing.
