Background: BEX3 (Brain Expressed X-Linked 3) is a Protein Coding gene. Among its related pathways are p75 NTR receptor-mediated signalling and RET signaling. An important paralog of this gene is BEX5. May be a signaling adapter molecule involved in p75NTR-mediated apoptosis induced by NGF. Plays a role in zinc-triggered neuronal death (By similarity). May play an important role in the pathogenesis of neurogenetic diseases.

Application Notes: Optimal working dilutions should be determined experimentally by the investigator. Suggested starting dilutions are as follows: WB (1:500-1:2000), ELISA (1:5000-1:20000).
