**Background:** MAP3K14 (Mitogen-Activated Protein Kinase Kinase 14) encodes mitogen-activated protein kinase kinase kinase 14, which is a serine/threonine protein-kinase. This kinase binds to TRAF2 and stimulates NF-κappaB activity. It shares sequence similarity with several other MAPKK kinases. It participates in an NF-κappaB-inducing signalling cascade common to receptors of the tumour-necrosis/nerve-growth factor (TNF/NGF) family and to the interleukin-1 type-I receptor. MAP3K14 is a Protein Coding gene. Diseases associated with MAP3K14 include Nik Deficiency. Among its related pathways are 4-1BB Pathway and RANK Signaling in Osteoclasts.

**Application Notes:** Optimal working dilutions should be determined experimentally by the investigator. Suggested starting dilutions are as follows: WB (1:500-1:2000), ELISA (1:5000-1:20000).

**Storage Buffer:** PBS, pH 7.4, containing 0.02% Sodium Azide as preservative and 50% Glycerol.

**Storage Instructions:** Stable for one year at -20°C from date of shipment. For maximum recovery of product, centrifuge the original vial after thawing and prior to removing the cap. Aliquot to avoid repeated freezing and thawing.
